## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-17 are rejected under 35 U.S.C. 102(e) as being anticipated by White, III (6,561,454). White discloses a cabin services system having a plurality of subsystems (network devices), a controller (avionic computer) and one or more busses (transmission lines), switches (see the hub) in a star configurations, programmable modules (inherent that the network devices are programmable), where the network devices is a communication device, where the crew can interface with the subsystems (inherent that crew interacts with aircraft system control). A lookup table (i.e. a data structure) is most commonly used to replace a runtime computation with a simpler lookup operation. The speed gain can be significant, since retrieving a value from

memory is often faster than undergoing an expensive computation. It is inherent that the software used in the controllers of White use look up tables because they are the preferred method of electronic computations.

3. Claims 18-20 are rejected under 35 U.S.C. 102(e) as being anticipated by White. White discloses connecting modules (network devices) to busses (transmission lines), receiving information from the aircraft (avionics computer), activating the network devices, determining control commands for controlling the modules using a look up table (inherent, see examiners explanation in paragraph 2), where the devices can be used to control the communications of the craft.
